

DIME TIME

One Founder. 12 Months. From Zero Code to Live Money Movement.

Tim Carlisle, Founder

U.S. Navy Veteran | MBA + MIS (UNLV) | Dallas, Texas

11 YEARS

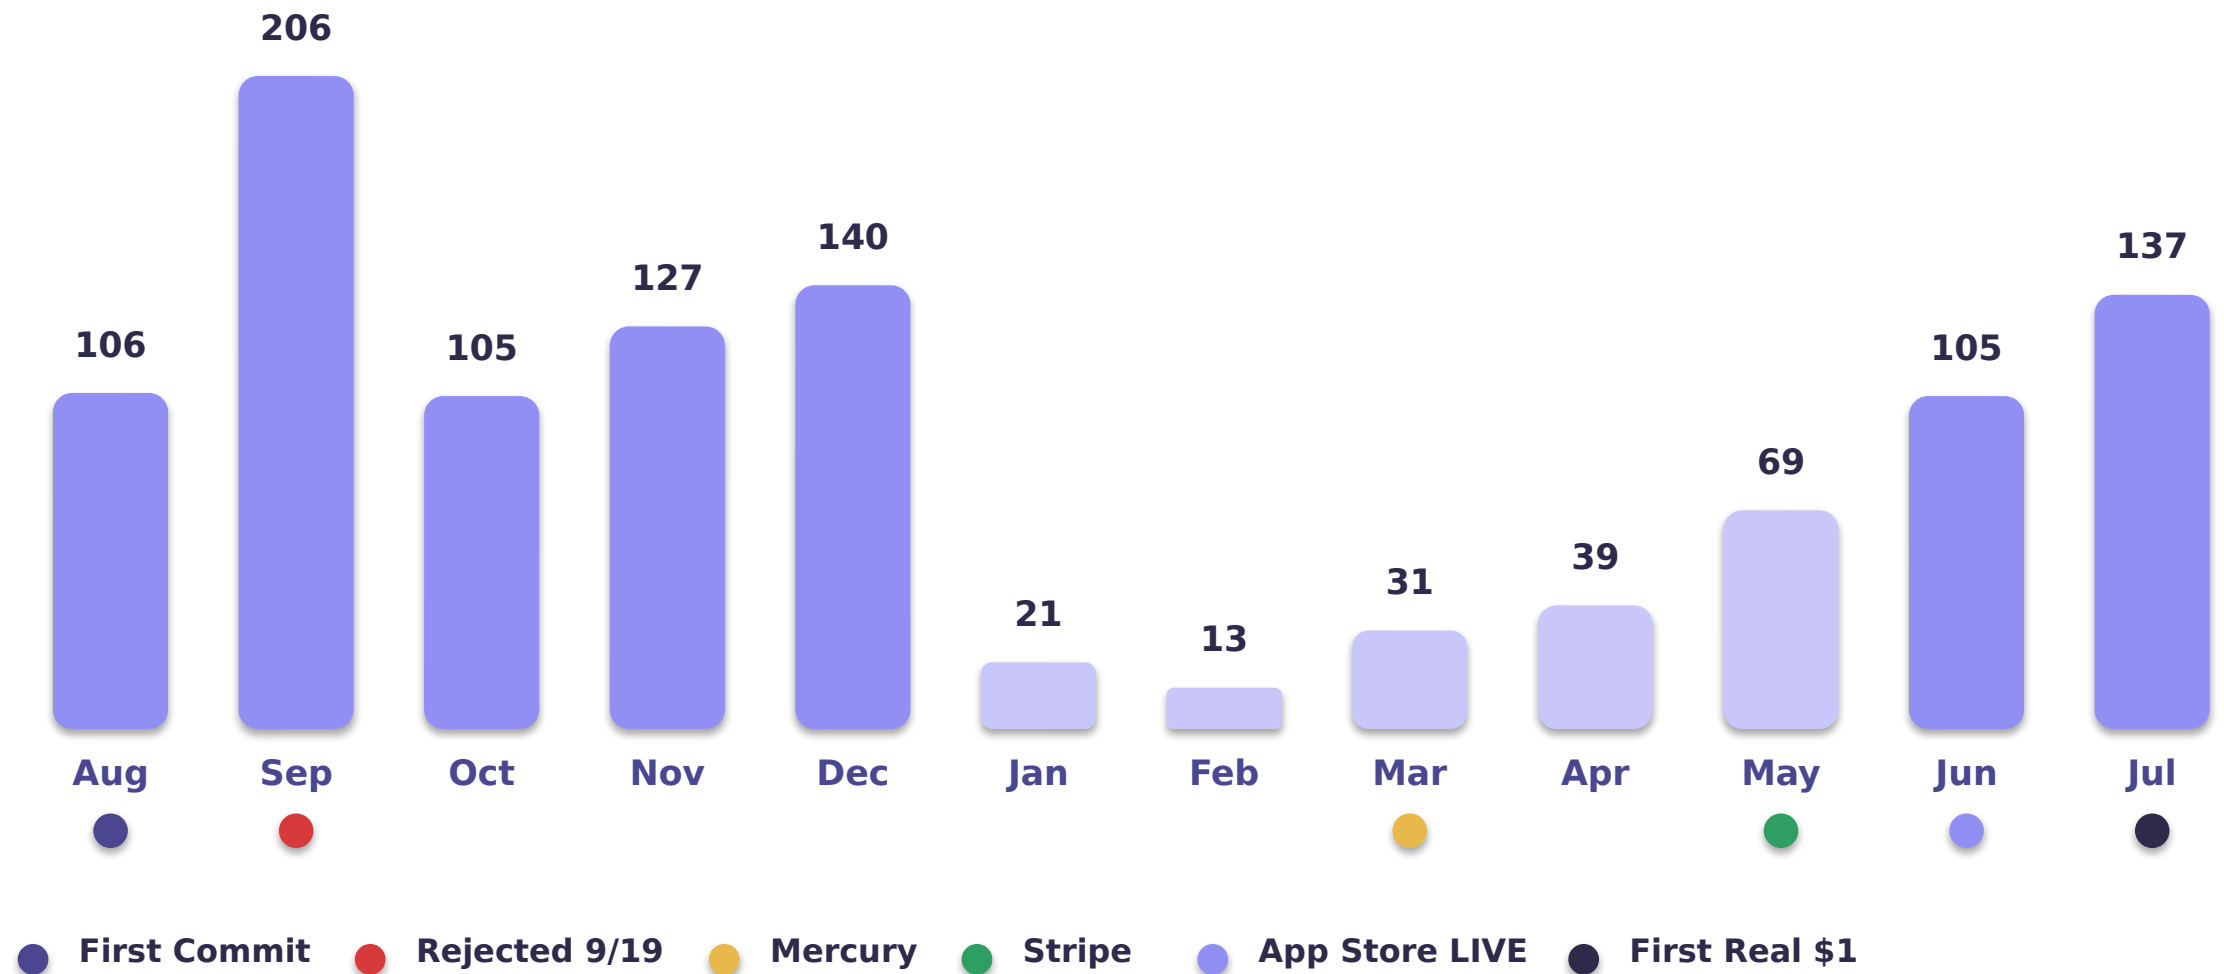

No Funding
No Team
No Code

Just an idea: redirect spare change toward DEBT, not savings.

August 3, 2025
Everything changed.

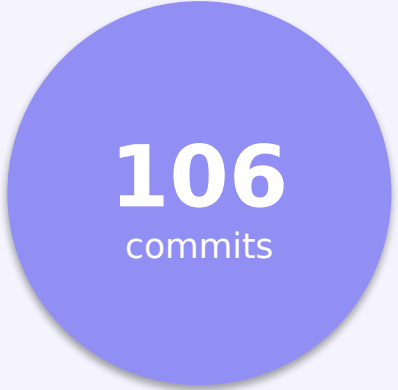

THE YEAR AT A GLANCE

1,099 commits, month by month

MONTH 1 • AUGUST 2025

The Explosion

106
commits

First commit: August 3, 2025.

Core app, purple brand, and crypto round-ups — built in the FIRST WEEKEND.

By August 12: database, bank linking, PIN security, and the round-up engine.

Day 11: iPhone app development begins.

A first iOS app (“Dime Time Technologies”) starts taking shape — ~60 commits of work that won't survive the year.

MONTH 2 • SEPTEMBER 2025

Biggest Month. First Heartbreak.

206
commits

Lavender brand locked in. Legal agreements.
Analytics.

Sila Money wired up as the ACH test sandbox —
then quoted \$5,000/month. Never viable.

TestFlight, CI/CD pipeline, and encryption all arrive
the same month.

SEPTEMBER 19

Founder's Birthday
First App Submitted to Apple

REJECTED

TestFlight opened to a blank landing page.
Weeks of fixes couldn't save it.

MONTHS 3-5 • OCTOBER – DECEMBER 2025

372 COMMITS

Three Months. Complete Rebuild.

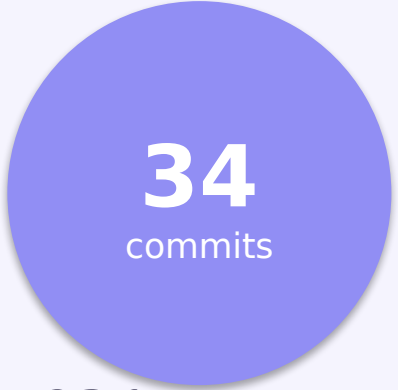

First app scrapped. iOS project reborn under a new identity.

Certificates. Provisioning profiles. Signed builds. The exact machinery that broke the first app — rebuilt properly this time.

December's log: “Build application archive and export successfully.”

MONTHS 6-7 • JANUARY - FEBRUARY 2026

The Quiet Grind

34
commits

Lowest commit counts of the year. Highest-stakes work of the year.

Face ID + PIN app lock. Encrypted tokens. Hardened passwords. Rate limiting.

The unglamorous security work fintechs live or die on.

February 21: the first patent documentation enters the project.

All of it built nights and weekends around a 30-40 hour/week sommelier job.

The Bank That Said Yes

31
commits

X Axos

X Brex

X Two more banks

✓ MERCURY

Business banking was a wall of rejections — until Mercury said yes.

March 28: Mercury becomes Dime Time's business bank. Sila's sandbox era ends. Plaid moves to production.

The money infrastructure takes its final shape.

MONTHS 9-10 • APRIL - MAY 2026

Finding the Rails

108
commits

Plaid said no.

Rejected for ACH transfers. Dwolla and others evaluated next.

Stripe said yes.

May 27, 2026: payment rails secured.
Money movement had a home.

Also this stretch: D-U-N-S number • provisional patent drafted (USPTO-ready) • patent deck + business plan • new marketing site with legal pages

And a security scare handled by the book — an internal config slip exposed an encryption key inside the project (never externally). Treated as compromised anyway: new key, every credential re-encrypted, zero user impact.

MONTH 11 • JUNE 2026 • 105 COMMITS

JUNE 29

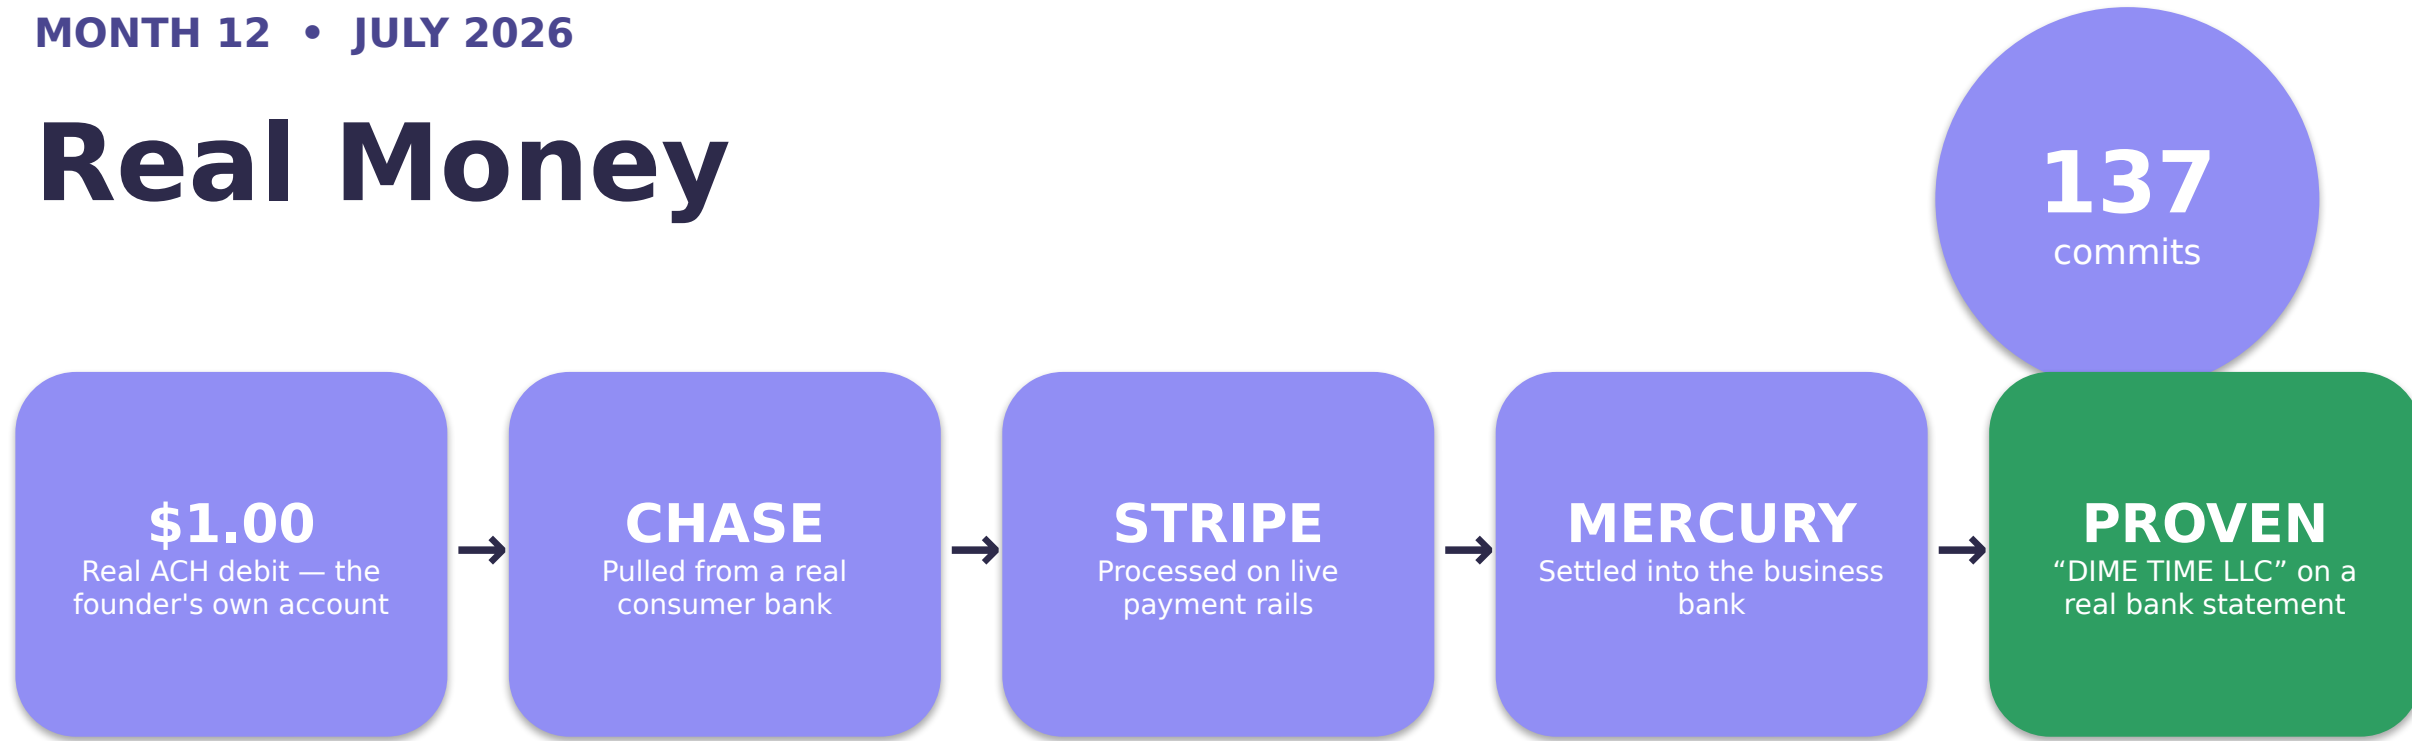

DIME TIME GOES LIVE ON THE APPLE APP STORE

Apple's last punch — a “duplicate app” rejection caused by the first app's ghost record — cleared through the Resolution Center.

283 days after the birthday rejection, the answer flipped to yes.

MONTH 12 • JULY 2026

Real Money

July 7-8: initiated • July 13-14: settled • July 15: payout landed in Mercury

Also this month: v1.0.4 redesign approved by Apple, admin money controls, automatic debt import built, AI-readable web guides.

The machine works — proven with real money, 346 days after the first commit.

WHY DIME TIME EXISTS

Americans carry trillions of dollars of consumer debt.

Most financial apps help people save.

Dime Time was built to help people owe less.

Every rejection was a redirect.

NO

- ✗ Apple — birthday submission
- ✗ Sila — \$5,000/month pricing
- ✗ Plaid — ACH transfers
- ✗ Axos
- ✗ Brex
- ✗ Two more banks

YES

- ✓ Mercury — business banking
- ✓ Stripe — payment rails
- ✓ Apple — June 29, 2026
- ✓ USPTO — provisional patent drafted
- ✓ The first real dollar — July 2026

The Storefront Before the Store

Aug 2025

Website live with the lavender brand — two weeks after the first commit

Sep 2025

Privacy policy, Google Analytics, veteran-owned badges

Oct 2025

QR codes handed out at a finance conference — before the app existed

May 2026

Full marketing site: FAQ, legal pages, bot-protected contact form

Jul 2026

SEO + AI-readable guides — built to be found by Google AND ChatGPT

The storefront existed before the store — and it was already measuring visitors.

BY THE NUMBERS

1,160+
commits

35,000+
lines of code

12
months

1
founder

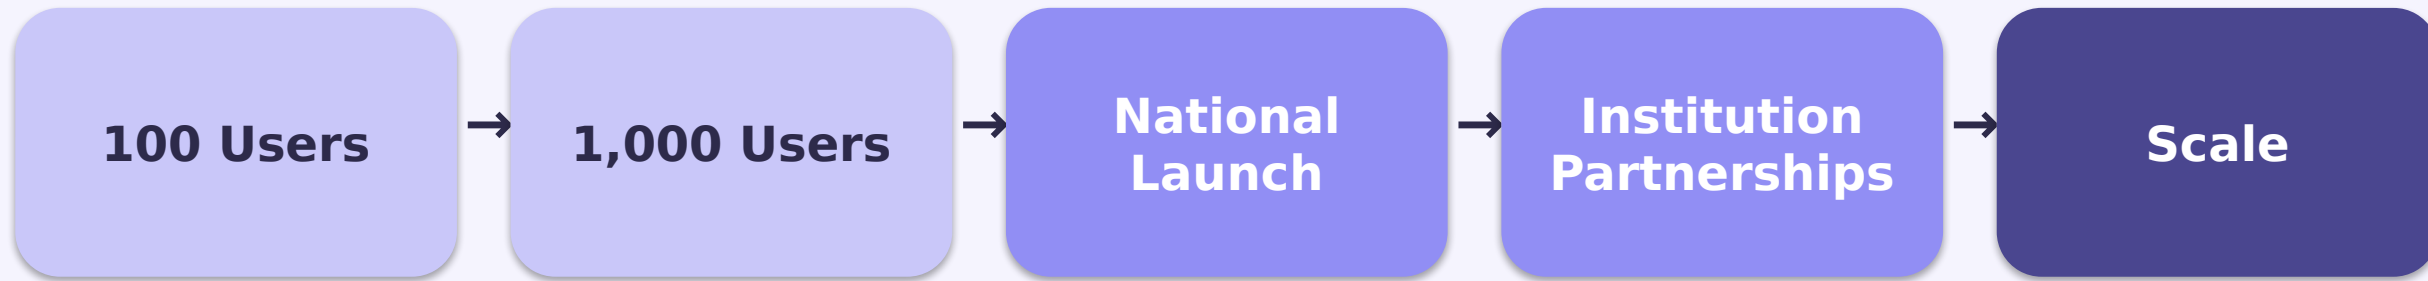

\$0
raised

1
live fintech

Built while working 30-40 hours a week on his feet.

WHAT'S NEXT

The road from here is measured in users.

Near-term: automatic debt import in production • first paying subscribers (\$2.99/mo) • the public launch announcement.

Positioning: a case study in building a regulated fintech from scratch — while working full-time.

Built by one person.
Nights.
Weekends.
Seven rejections.
Still launched.
